VF Drive

Product Information

Driving Licence Verification

Know who you're dealing with

Engage with confidence with the ability to digitally capture and record Driver information while verifying they are indeed the holder of the licence card.

VF Drive matches the licence holder to their provided documentation. The licence holder can be linked to a vehicle and a log-book created for verification purposes.

Process

1. Scan a driving licence disk with your mobile & take a photo of the Driver.
2. The system will decrypt the barcode and compare it to the Driver providing match / not.
