VF QUICK CHECK

Product Information

Vehicle Risk Profile

Forewarned is Forearmed

Deal confidently with an immediate risk profile when buying, trading or selling a vehicle.

The VF Quick Check provides the User with a digital risk profile of the vehicle.

Medium-risk and high-risk profiles are verified by our online investigative team.

Process

1. Scan the vehicle licence disk with your mobile device or input the vehicle details.
2. The submitted information is processed on the system against the datasets. An immediate risk status is achieved (green, amber or red) and displayed.
3. Any amber or red result will be doubled checked by our investigative team. Further information and any changes to that status will be communicated via email.
