# VF Parts

Product Information

## Asset Marking System

### Trace it back to the source

Protect your hardware and brand from thieves or counterfeiters – lock the original identity for proof of where the Part originated.

Avoid fakes that do not concern your company.

A trace kit is provided to mark new items as well as a system to capture the Part information and link it for future verification.

### Process

1. Purchase an asset kit from VF.
2. Apply asset trace to new stock items.
3. Capture the asset information to stocked trace.
4. Review historical information during warranty claims.
